The Best And Most Efficient Way To Fix Windows Smbx Errors If the folder could not be accessed then your access rights are wrong. Third, add the administrator account name in the "My Network Places" dialog box. This is my newest network. Click OK to close the "My Network Places" dialog box. If the network computer is used by other users on the network you will need to give full control permissions to the account that is using the application. Use the additional administrator account to allow the application to access the shared folder. If the shared folder is currently shared by the administrators on the domain then log in as the domain administrator and add the share permissions you want to allow the application to access. If the Network group is your domain group then you will need to log in as a member of that group. Click Start, click Run, and type regedit. Press Enter. In the Registry Editor, locate the following key: HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Servicing\Servicing Core. Click Start, click Run, and type regedit. Press Enter. In the Registry Editor, locate the following key:
HKEY_LOCAL_MACH 82157476af
